

HOW TO DETERMINE THE CORRECT SIZE OF THE SIZED LINE PADS:

1. Place the printout **on an edge** (for example a door or wall). Place the foot on the printout, which should end with the heel on the edge (for example door or wall).
2. Using a pencil, draw dots between the toes (**as close to the toe grab as possible**).
3. Now you can see the right size

If the course of your toes does not correspond to one of the drawn lines, the toe bridge of our SIZED LINE unfortunately does not fit your feet.

In this case we recommend the CUSTOM LINE binding.

ATTENTION!

The document corresponds to the original size if the black line on your printout is 10 cm long.
For the correct determination, the document must be in original size!

10 cm
